Part II – Activity Schedule

Section V. Activity Schedule

1. Survey Background

This project work is being carried out as a part of National Hydrology Project to develop and strengthen Water Resources Information System (WRIS). Satellite imagery offers many advantages and a range of digital products, which will be significant for modeling and other applications in the river basins/deltas of India. The High resolution satellite imagery (HRSI) along with existing Survey of India Maps and data will be used in this project for generation of GIS ready data, and DEM of the given AoI. Ortho-rectified satellite imagery will be used for topographical database generation to the extant ground features identifiable and interpretable from it, ground work will be minimized and the features will be extracted using standard hardware and software for preparation of GIS ready database. High resolution satellite imagery of better than 1 meter GSD after ortho-rectification will be used for feature extraction. It may not be feasible to extract all features from satellite imagery due to interpretation issues; therefore certain features will be taken from existing geo referenced maps of Survey of India. Existing data of Survey of India already have height information in the form of contours which will be digitized to generate required DEM.

2. The proposed services will cover river basins/deltas covering total area of approximately 835742 sq. km as mentioned below in Table.1.

1. Project Objectives

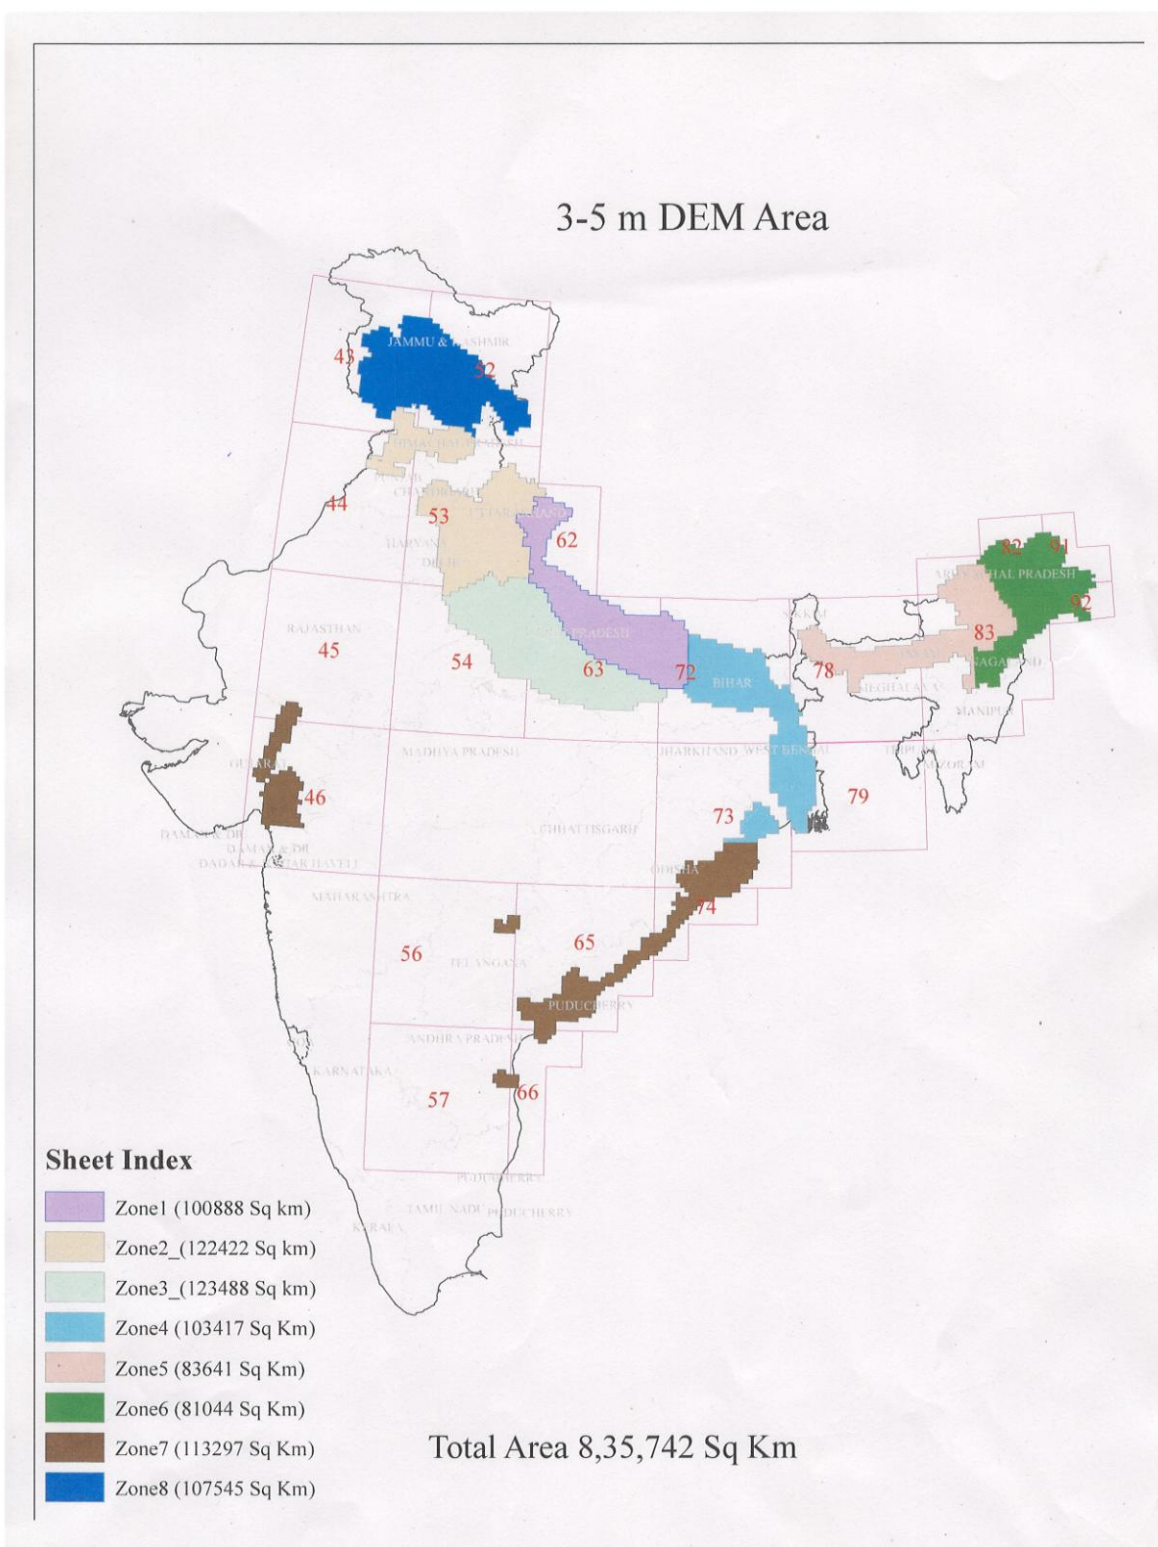

This data will enable flood inundation modeling and planning drainage management in the flood-prone areas of the basin which would help in improved flood hazard mapping, flood risk management and other planning purposes. It will support the strengthening of national and sub-national water information centres with web-enabled WRIS (Water Resources Information System).

Standardized WRIS will enable stakeholders to make comprehensive, timely, and integrated water resources information available to decision makers for effective planning, decision making, and operations. The project work would deliver:-

- All raw datasets and all data provided by SOI including digital vector/ raster/ satellite imagery, etc.
 - GIS ready database along with Contours in *.shp* and geo database format
 - DEM in .GEOTIFF and ASCII format.
 - Two sets of hard copies for First QC and Final QC each on 1:25k scale.
 - Final output hard copy on 1: 25k Scale, 10 copies (**02 copies in Polystyrene and 08 copies on good quality 90 GSM paper**) each as per the layout provided by SoI.
 - QC reports for all stages given in Performance Specifications.
2. Final project completion report.

Z_o is the number of units of currency of the country of the index, equivalent to one unit of the currency payment on the date of the base index, and Z_n is the corresponding number of such currency units on the date of the current index.

Description of Services

1.1. Setting of Production centers

The contractor shall set up secure production centre, with servers, Desktop/ Workstations, biometrics and other suitable infrastructure in the premises of Survey of India at Dehradun. Survey of India will provide space with air conditioning and electric supply. The Production sites shall be handed over to the contractor on as-is-where-is basis. The contractor is advised to visit the site for estimating the cost for site preparation before submission of bid. The Contractor shall be responsible for all site preparatory works such as data & electric networking in the secured premises of Survey of India, provision of appropriate Storage System along with Controller and OS, servers, back-up devices, computer hardware, software, networking in the sites, plotters, with the required internal electric wiring, furniture, UPS, Generators etc. The Contractor should set up processing centers with appropriate space to handle input data and process it efficiently and comply with the security instructions issued by Survey of India during production. After the completion of project all the infrastructure created for production centre including hardware/software, storage media/hard disks used for production shall be taken back by the bidder after successful completion of work and compliance of security instructions to be issued by the Survey of India. The Bidder shall submit only the use rates in the Priced Activity schedule package-wise/lots for the hardware /software and other infrastructure required for successful completion of the assignment.

While submitting the bid, the bidder will give the details of the hardware, software and other resources and infrastructure proposed to be deployed by them to meet the timeline and technical specification of the project deliverables as set by the employer. An indicative list of specification and quantity of Hardware and Production Mapping software has been given in **BDS correlating with clause 5.5 c** for completing the Task for each

Area within the set timeline and technical specification of the deliverables.

1.2 2D feature extraction and preparation of GIS ready database:

Feature Extraction shall be carried out in 2D mode for Topographical features as per Data Model Structure (DMS) which shall be supplied by Survey of India. Feature extraction shall be carried out in such a way that for urban area features corresponding to 2k scale shall be extracted, for semi urban area features corresponding to 4k scale and for other areas

features corresponding to 6k scale shall be extracted. Rule based digitization shall be carried out for creation of all datasets. GIS ready database shall be created based on topological rules. River basin/ Lot/ package wise ortho-rectified sub meter resolution Satellite Imagery shall be used as a source material for preparation of GIS ready database. Satellite imageries shall be supplied by Survey of India with broad configuration as follows:

Imagery type : Mono/Stereo
Sensor : Triplesat/Komsat 3A
Spatial Resolution : 0.7m/0.55m
Product type : \$-band Ortho Rectified Imagery (ORI)

Preparation of seamless GIS ready updated database shall be carried out as per feature based data model and supervised classification & attribute editing of features using 25k/50k and other maps/data provided by the employer.

1.3. Incorporation of contours from SOI maps/data/ other sources:

1:25k sheets for which digital data of contour/ spot heights is available with SOI, will be provided to the contractor by SOI. These contours shall be incorporated with features extracted from satellite imagery. These contours will be suitably modified/ edited to ensure that they have correct correlation to the hydrological features so that contours correctly represent ridges and streams and be consistent with drainage structures. This correction of contours with hydrological features will be paripassu examined by SOI.

1.4. Generation of 3-5 m DEM:

DEM shall be prepared as per the extent and specification of 1:25 KSOI sheet. For those sheets for which SOI contours are available, DEM shall be created from digitized contours. For creation of DEM, first contours will be corrected with reference to the hydrological features as mentioned in para 4.3 above. Then seamless DEM for river basins/ lots/ packages with pixel size 10m will be prepared in .GEOTIFF and ASCII. Suitable interpolation method shall be employed for generation of DEM from contours. A TIN model shall be created from the contours.

For those sheets for which SOI contours are not available, DEM will be provided by SOI. Contractor will generate the contours at 5m contour interval from the DEM provided and make it edge adjusted with the adjoining sheets. Adjustment will also be done with the sheets for which SOI contours are available. After this edge adjustment of the contours, the final DEM will be created.

Void areas (i.e. areas outside the project boundary but within any tiling scheme) shall be coded using a unique —NODATA value.

1.5. Incorporation of features and annotation:

Features and annotations from SOI 1:25k and other map/ data provided by SOI shall be incorporated with features extracted from satellite imagery and contours. The proper registration with extracted features and included features will be maintained by the contractor.

1.6. Quality control/Quality assurance:

Quality control/Quality assurance shall be the responsibility of the contractor as per the specifications and quality requirements indicated in performance, specifications and drawings. SOI may depute suitable manpower for paripassu examination of the work along with QA/QC arrangement. Contractor will make available the entire data for examination by SOI during any stage of work as required by SOI. Two set of Hard copies of all sheets will be provided each for First and Final QC.

1.7. Delivery of products and reports:

The contractor shall deliver:

- All raw datasets and all data provided by SOI including digital vector/ raster/ satellite imagery, etc. **The area included in this lot/package may vary $\pm 15\%$.**
- GIS ready database along with Contours in *.shp* and geo database format
- DEM in *.GEOTIFF* and ASCII format.
- Two sets of hard copies for First QC and Final QC each on 1:25k scale.
- Final output hard copy on 1: 25k Scale, 10 copies (**02 copies in Polysterene and 08 copies on good quality 90 GSM paper**) each as per the layout provided by SoI.
- QC reports for all stages given in Performance Specifications.
- Final project completion report.

1.8. Miscellaneous items:

Miscellaneous items if any shall be specified in the activity schedule, which are not part of any services in the activity schedule.

5.3.Feature Geometry:

The size, shape and scale at which the geo-spatial feature is mapped define its geometric representation in GIS.

Area features like water bodies are represented in polygon geometry;

Line features like water supply network are represented in line geometry; point features like Electric Pole are represented in point geometry. Some of the area features like roads are represented in both polygon and line geometry. For example, the width of road is represented in polygon and road centre line is represented in line geometry. In such cases attributes are associated with line feature. The basic criteria to define the geometry of geo-spatial features are given below:

Features having an area more than 5 pixels by 5 pixels shall be represented as polygons. In other cases, where the features have area less than 5 pixels by 5 pixels, defined as point or line based on the feature type.

In the Road layer, Roads having width of 7.5m and more will be captured as polygon and the road centre as line. Roads having width of less than 7.5m will be captured only as line.

Rail feature, shall be captured as line. Railway track area shall be captured as polygon.

All utility network layers are defined as lines and the nodes (starting point, intersections, valves, end points etc.) defined as points.

Features such as, electric poles, cell towers etc., are defined as point.

- Final QA/QC**- Final QA/QC will be done on softcopy as well as hard copy. Two sets of hard copies for First QC and Final QC each on 1:25k scale will be provided by the contractor to SOI. Contractor will carry out all the corrections marked by SOI. QA/QC of the final GIS database will also be carried out.

Apart from the product specifications and standards, the following parameters are important in assuring the final GIS database product quality.

10. Final Quality check

Around 5-10% of output data delivered by the service provider will be subjected to Final Quality Check. Product files will be selected on a systematic basis to ensure that QC covers entire river basin/site area. Deliverables will be selected possibly on a random basis but also potentially to provide closer inspection in areas where problems are anticipated.

If more than 5% of the dataset that are subjected to external QC fail to meet the

specifications laid down in Tender Document, all products will be returned to the contractor for further QA. In effect, Employer will pass responsibility to the contractor to provide adequate and clear internal Quality Audits to identify the extent and cause of the problems so established. The contractor will be expected to rectify these problems, and (where necessary to comply with the specification) make new products at his own cost.

10.1 Redelivery of products will be followed by a further independent check on a new sample of the products. This procedure will continue until the products become finally acceptable under the terms above. The acceptance report (Pass /Fail) shall be given by the Engineer within a fortnight of each delivery/re-delivery of the data made by the contractor.
