NATIONAL WATER ACADEMY  
PUNE**

## INTRODUCTION

Water is one the most crucial natural resource for the existence of the human beings. Water resource management is the activity of planning, developing, distributing and managing the optimum use of water resources.

Database management in water sector is of utmost importance for use of same in assessment of water potential, planning and design of water resources projects, flood forecasting, Interstate dispute resolution, International water dispute resolution, study of Climate change and its effect on water availability.

WIMS is this way an important tool which is being developed for web-based water data platform for Surface/groundwater on real time basis and thus creating a centralized pool of information at country level.

## PROGRAM CONTENTS

The program will mainly attempt to cover following aspects:

- Overview of WIMS
- Creation of HO Network
- Real time data entry
- Data processing
- Data dissemination
- Syncing of database management with real time data transmission system
